

# An Introduction to PocketBase:

A Go-Based Backend as a Service

by Haseeb Majid

# About Me

- Haseeb Majid
  - Backend Software Engineer at Curve
  - <https://haseebmajid.dev>
- Loves cats 
- Avid cricketer  #BazBall

Adding a new side project to the  
list of unfinished side projects

# What is a Backend as a Service (BaaS)?

Handle the basic repetitive tasks

# Popular BaaS

- Firebase
- Supabase
- Amplify

# Why use PocketBase?

- Runs from a single binary
- Written in Go
  - Extend as framework
- Easy to use Dashboard

# Dashboard

The screenshot shows a dashboard interface for a database collection named "users". On the left is a sidebar with a "PB" logo, a search bar "Search collections...", and a list of collections: "users", "blocco", "messages", "posts", and "messagesReport". A "+ New collection" button is at the bottom of the sidebar. The main area has a header "Collections / users" with settings and refresh icons, and buttons for "</> API Preview" and "+ New record". Below the header is a search bar "Search term or filter like created > '2022-01-01'...". A table header lists fields: "id", "username", "email", "name", "avatar", "website", "created", and "updated". The table body contains the message "No records found." and a "+ New record" button.

# Use as a Framework

```
go mod init gitlab.com/hmajid2301/talks/.../example
go get github.com/pocketbase/pocketbase
```

```
1 // main.go
2
3 package main
4
5 import (
6     "log"
7
8     "github.com/pocketbase/pocketbase"
9 )
10
11 func main() {
12     app := pocketbase.New()
13
14     if err := app.Start(); err != nil {
15         log.Fatal(err)
16     }
17 }
```

```
1 // main.go
2
3 package main
4
5 import (
6     "log"
7
8     "github.com/pocketbase/pocketbase"
9 )
10
11 func main() {
12     app := pocketbase.New()
13
14     if err := app.Start(); err != nil {
15         log.Fatal(err)
16     }
17 }
```

```
go run main.go serve --http=localhost:8080
```

# Add a Route

```
1 # main.go
2
3 import (
4     "net/http"
5
6     "github.com/labstack/echo/v5"
7     "github.com/pocketbase/pocketbase"
8     "github.com/pocketbase/pocketbase/apis"
9     "github.com/pocketbase/pocketbase/core"
10 )
11
12 func main() {
13     //...
14
15     app.OnBeforeServe().Add(func(e *core.ServeEvent) error {
16         router := app.Router().GET("/{comment}", handler, middleware)
```

```
app.OnBeforeServe().Add(func(e *core.ServeEvent) error {
    e.Router.POST("/comment",

        //handler
        func(c echo.Context) error {
            return c.NoContent(http.StatusCreated)
        },

        //middlewares
        apis.ActivityLogger(app),
        apis.RequireRecordAuth(),
    )
    return nil
})
```

# Client Code

```
import PocketBase from "pocketbase";

const pb = new PocketBase("http://127.0.0.1:8080");
// code to auth user
// ...

await pb.send("/comment", {
  // for all possible options check
  // https://developer.mozilla.org/en-US/docs/Web/API/fetch#options
});
```

# Add Record to DB

```
1 // ...
2 type Comments struct {
3     models.BaseModel
4     Post    string `db:"post" json:"post"`
5     User    string `db:"user" json:"user"`
6     Message string `db:"message" json:"message"`
7 }
8
9 func (c *Comments) TableName() string {
10     return "comments"
11 }
12
13 var _ models.Model = (*Comments)(nil)
14 func main() {
15     // ...
16 }
```

# Add Record to DB

```
1 // ...
2 type Comments struct {
3     models.BaseModel
4     Post      string `db:"post" json:"post"`
5     User       string `db:"user" json:"user"`
6     Message   string `db:"message" json:"message"`
7 }
8
9 func (c *Comments) TableName() string {
10     return "comments"
11 }
12
13 var _ models.Model = (*Comments)(nil)
14 func main() {
15     // ...
16 }
```

# Add Record to DB

```
1 // ...
2 type Comments struct {
3     models.BaseModel
4     Post      string `db:"post" json:"post"`
5     User       string `db:"user" json:"user"`
6     Message   string `db:"message" json:"message"`
7 }
8
9 func (c *Comments) TableName() string {
10     return "comments"
11 }
12
13 var _ models.Model = (*Comments)(nil)
14 func main() {
15     // ...
16 }
```

# Migrations

```
ls -al migrations/
```

15 func main() {
16     app := pocketbase.New()
```

# SQLite

- Does it Scale?
  - Write-Ahead Logging (WAL mode)

# What is WAL Mode?

# Why use WAL Mode?

- Is significantly faster in most scenarios.
- WAL uses many fewer `fsync()` operations
- Provides more concurrency as a writer does not block readers.

# Testing

```
1 package main
2
3 import (
4     "net/http"
5     "testing"
6
7     "github.com/pocketbase/pocketbase/tests"
8     "github.com/pocketbase/pocketbase/tokens"
9 )
10
11 // username: test@example.com
12 // password: password11
13 const testDataDir = "./tests/pb_data"
14
15 func TestCommentEndpoint(t *testing.T) {
16     recordToken, err := generateRecordToken("user1", "test@example.com")
```

# Testing

```

11  script:
12    - fly deploy
```

# Other Features

- Expanding Relations
  - Join tables without making additional request
- Uploading Files
- API to manage (DB) backups

# Caveats

- Need to self-host
  - PocketHost
- Does not have a stable API yet
- Can only scale vertically
  - LiteFS

# Any Questions?
